**Garden as an art:**

Garden design is considered to be an art in most cultures, distinguished from gardening, which generally means garden maintenance. Garden design can include different themes such as perennial, butterfly, wildlife, Japanese, water, tropical, or shade gardens.

In Japan, Samurai and Zen monks were often required to build decorative gardens or practice related skills like flower arrangement known as *ikebana*. In 18th-century Europe, country estates were refashioned by landscape gardeners into formal gardens or landscaped park lands, such as at Versailles, France, England. Today, landscape architects and garden designers continue to produce artistically creative designs for private garden spaces. In the US, professional landscape designers are certified by the Association of Professional Landscape Designers.

**Gardening** is the practice of growing and cultivating plants as part of horticulture. In gardens, ornamental plants are often grown for their flowers, foliage or overall appearance; useful plants, such as root vegetables, leaf vegetables, fruits, and herbs, are grown for consumption, for use as dyes or for medicinal or cosmetic use. Gardening is considered by many people to be a relaxing activity.

Gardening ranges in scale from fruit orchards, to long boulevard plantings with one or more different types of shrubs, trees, and herbaceous plants, to residential back gardens including lawns and foundation plantings, and to container gardens grown inside or outside. Gardening may be very specialized, with only one type of plant grown, or involve a variety of plants in mixed plantings. It involves an active participation in the growing of plants, and tends to be labor-intensive, which differentiates it from farming or forestry.

The purpose of this course is to help you look closely at the plants around you from a creative point of view.
